

Buluthan İnan

Full Stack & Flutter Developer

İzmir, Türkiye | +90 536 443 69 96 | buluthaninan.dev@gmail.com | github.com/buluthaninan | linkedin.com/in/buluthaninan

Full stack developer working on enterprise ERP systems. C#, .NET Core and React on the web, Flutter on mobile. In a small team at ESBAŞ I own the whole cycle: talking to the company that has the need, analysis, development, testing and release. The entire mobile layer of the organisation is mine. For my M.Sc. thesis I developed a model for adapting Scrum to software maintenance.

EXPERIENCE

Full Stack & Flutter Developer · ESBAŞ — Aegean Free Zone

October 2022 — Present · İzmir, Türkiye

- Built and shipped the organisation's entire mobile layer in Flutter: an ERP companion app used daily by 100+ employees and a menu planning / ordering platform used by 15+ companies.
- Wrote three field applications for Zebra and Honeywell handheld terminals: warehouse (stock, counting, transfers), zone transit logging, and car park. In the car park app a plate is read by camera through a Google API, and dwell time is computed into a charge; transit records feed billing directly as well.
- Designed and built from scratch a module that reads a photographed receipt with OpenAI and posts credit-card and cash-advance expenses into the ERP, removing manual data entry for the accounting and finance team.
- Developed ERP modules in C# and .NET Core with React front-ends — contracts, purchasing flows and leave request forms — and maintained screens on the system's legacy ASP.NET stack.
- Alongside development, own the analysis, testing and communication with the companies using the system.

Software Developer Intern · ESBAŞ — Aegean Free Zone

July 2022 — August 2022 · İzmir, Türkiye

- Built an internal ordering system with Flutter and Firebase, integrated with C# APIs.
- Contributed to ERP API testing, web module development and code reviews.

EDUCATION

M.Sc. Computer Engineering · Izmir University of Economics

February 2023 — June 2026 · GPA 3.36 / 4.00

- Thesis: *Adapting Scrum for Effective Software Maintenance: Understanding the Discrepancy and Bridging the Gap*. Systematic literature review, case-oriented interviews with 10 industry practitioners and an AHP study with a 15-expert panel (group consistency ratio 0.0089); urgent work and technical debt accounted for 45% of the problem weight.
- The resulting SAMIM model does not replace Scrum — it breaks that loop with four interventions: a **rotating System Steward role** owning triage and organisational memory, capacity buffers, a swap policy, and a stabilisation window. Advisor: Asst. Prof. Dr. Kaan Kurtel.

B.Sc. Software Engineering · Izmir University of Economics

September 2018 — June 2022 · GPA 3.01 / 4.00

- Vice President, Theatre Club.

SKILLS

Languages C#, Dart, JavaScript, Java, SQL, HTML, CSS

Frameworks .NET Core, ASP.NET, React, Flutter, Entity Framework

Data and Services SQL Server, RESTful APIs, OpenAI API, Firebase, Firestore, Supabase, OneSignal

Tools and Practice Git, TFS, Docker, Jira, Postman, Agile / Scrum

PERSONAL PROJECT

Persisto — A habit and streak tracking app I wrote in Flutter. Every category grows a tree through ten levels as the streak builds, and a woodcutter animation fells it when the streak breaks. Reminders are scheduled through OneSignal and the rest of the day's notifications cancel themselves once a category is completed. Streak and freeze logic is covered by unit tests.

CERTIFICATES AND LANGUAGES

Certificates IBM Cybersecurity — Network Security, System Administration, Tools

Languages Turkish (native), English (IELTS 6.5 — Upper-Intermediate), German (beginner)
